

SC

Monster mast climbing work platform **SC8000**

Scanclimber SC8000 is the right tool when the capacity and platform size of other mast climbing work platforms are not sufficient. It is a perfect choice for heavy-duty facade work, and for projects requiring large platform size.

Depending on the required loading capacity and platform length, it can be used as a single or a twin mast arrangement. SC8000 moves workers, tools and building materials to the desired height at a single lift.

Rack and pinion driven mast climbing work platform saves time and money at work sites.
